

17 Useful iPhone Applications You Should Install

So when someone came up to you and asked, so what's so great about the iPhone. You'll probably show them how cool the iPod cover flow is, or maybe how you can multi-touch zoom in and out of the photos; flipped them, etc. I've got to be honest, those are part of the attractions why I got myself an iPhone even when its not officially launch here in my country but however we've found cooler stuff in iPhone – the ability to support tones of cool applications and most importantly, rich 3rd party application developers.

At least 2 new applications are added to Installer.app for iPhone each day. Installer.app not only opens up the gate to rich 3rd party application but also keeping the install/uninstall steps easy. Here are some iPhone applications you should install, or at least try using them.

1. Community Resources

Developed by Nullriver, Inc this is your gateway to more 3rd party applications upon installed.

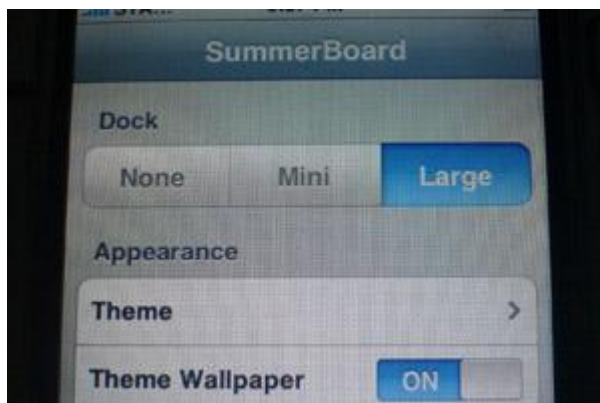

2. iApp-a-Day

iApp-a-Day is a project initiated for November 2007, aiming at contributing one application a day to the community. Worth checking out.

3. OpenSSH + BSD Subsystem

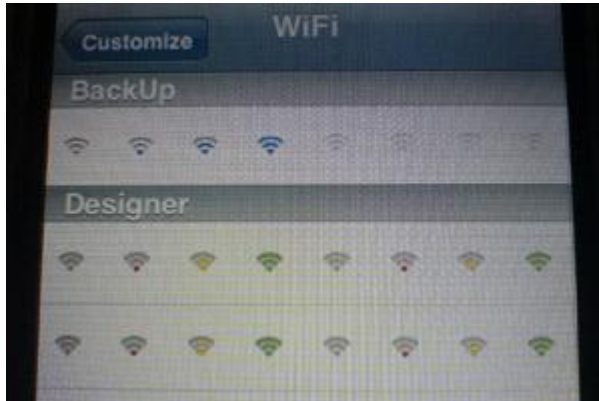

Installation of these two application allows you to access your iPhone via sFTP. This means you can access structure and files of your iPhone. Transfer your files as easy as dragging them in/out with FTP client.

4. SummerBoard

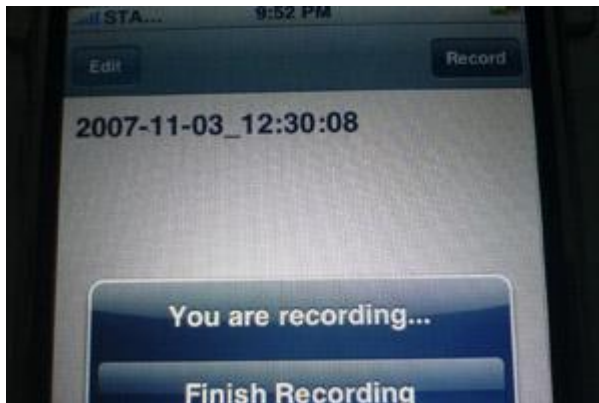

SummerBoard allows iPhone users to install more themes and wallpapers, making your iPhone more interesting.

5. Cuztomize

Cuztomize gives you more control over your iPhone. It allows you to cuztomize default iPhone assets like dock background, carrier iamges, Wifi images, bar images, edge icons, airplane icon, alarm icon, bluetooth icon, lock icon, loading image, badge graphics, phone keypad image, battery images, sound images, hud image, chat balloons images, main slider, power slider, call slider, highlight mask, system sound, calculator background, weather icons, weather background, notepad background, etc.

6. Vnotes

Voice recording is not build-in in a default iPhone but with Vnotes, you can record voice notes and playback anytime you wish.

7. iSplit

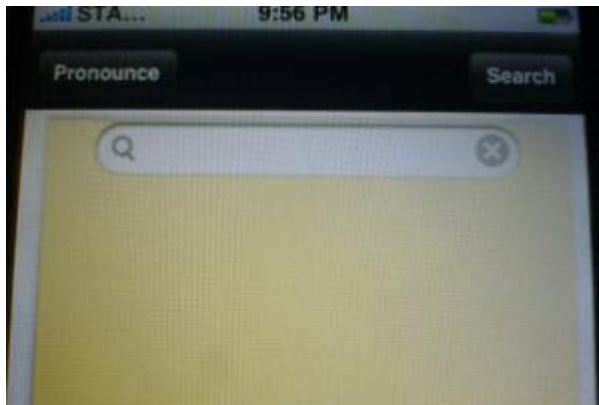

This is a very handy tool for those who like to go dutch on meals with friends but having problem calculating how much each individual have to pay. Option of tax, tipping calculation included.

8. NES

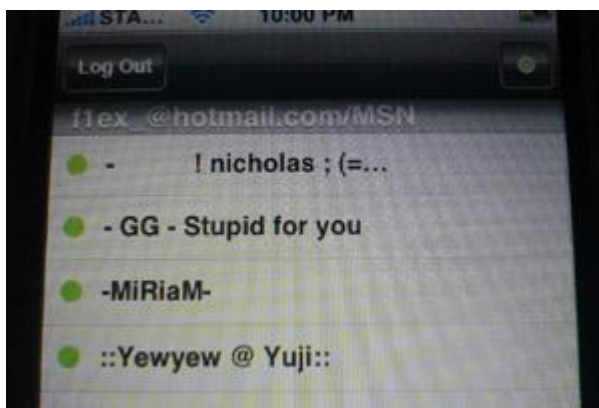

This is a NES (Nintendo Entertainment System) emulator. Upload your ROMs to given folder and enjoy NES games on your iPhone. Save games are also supported.
